

## A New Perspective on PlayBooster®

PlayBooster® is entering a new era of continuous play—built around movement, choice, and connection. This new collection of components transforms traditional playground layouts into flowing systems that keep kids engaged at every level.

Designed to encourage nonstop motion, PlayBooster® now features vertical circuits, under-deck play opportunities, and parallel play routes that support multiple users moving at once. With more ways up, through, and around, kids are empowered to explore play on their own terms.

More than individual components, this system introduces a whole new way to think about PlayBooster® - where every decision point invites activity, imagination, and inclusion.

- Vertical circulation paths
- Parallel play opportunities
- Under-deck engagement zones
- Multi-level play routes
- Designed for continuous movement
- Inclusive by design

## New PlayBooster® Components

### *Vertical Climbers & Circuit Paths*

Create momentum through play with vertical routes that connect multiple levels and encourage climbing, balance, and upper-body engagement.

### *Under-Deck Play Elements*

Activate the space below with sensory panels, gathering points, and social play opportunities that keep kids engaged at ground level.

### *Parallel Play Features*

Multiple pathways allow kids of different abilities to move side-by-side—supporting social interaction without forcing a single route.

### *Layered Play Experiences*

More routes across more levels mean fewer bottlenecks, increased capacity, and richer play experiences for everyone.
